

Pricing

An EPASS WMS subscription is only \$32 USD/month (per device)*

Get full inventory control, instantly quote prices, check stock, see when the next product is coming in, and more, all from a handheld device!

EPASS Android scanners can be purchased online from our partner at BARCODE-ARENA

Go to www.barcode-arena.com/epass-software.html or scan the QR code to view EPASS scanner models and accessories.

BARCODE-ARENA is based in the United States and provides full support, service, and repairs if needed. All service is performed "in-house" at their Atlanta facility.

For our Canadian customers, please contact Barcode-Arena directly via phone or email to place your order as their web site does not support shipping to Canadian addresses. Prices listed on their website do not include applicable duty and taxes.

How to Get Started

1. Purchase your scanner devices from BARCODE-ARENA using the above QR code or web address.
2. Download the EPASS WMS App on each device from <https://help.epass.software/wms>
3. Fill in the form below and email to support@epass.software. Once we receive your signed form, one of our EPASS support technicians will contact you.

Your Name: _____

Company Name: _____

Number of Devices: _____

Terms and Conditions

WMS Subscription fee is \$32 per device, per month and is renewed automatically each month, with a one month minimum charge per activated device. Cost of scanner devices is not included in the subscription fee. A stable Wi-Fi connection at the scanner's location is required. The scanner must be able to communicate with the WMS server (either by being on the same network or via VPN). 4G/5G devices are supported, however, you are required to connect to your network through a VPN first before using a broadband wireless connection. Technical support for any unapproved devices will be billed at the standard rate. An included one-time setup process with EPASS Support is required with your first scanner purchase. During this setup, EPASS Support will ensure that you have the latest software updates and will update your server to enable WMS and your scanner hardware. Please note, that to use WMS, your server must be able to load the latest EPASS updates. Similar to other devices connecting to EPASS, each scanner will take up one database license while connected.

By signing, I agree to the above terms and conditions:
